/ WHO WE ARE

Technology built around your business

AutomataCore Labs is a consulting and technology company specializing in enterprise solutions, product development, and digital transformation. We combine industry experience, technical expertise, and multilingual capabilities to help organizations modernize and grow.

20+

YEARS OF COLLABORATION

A partnership built on more than 20 years of collaboration

AutomataCore Labs was founded by CeFormT d.o.o. from Slovenia and Proverbum d.o.o. from Serbia—two companies that have worked closely together for more than two decades. The company brings that established relationship into a broader portfolio of enterprise technology and consulting services.

VISION

To be a leading provider of SAP technical and language expertise in Europe, recognized for innovative solutions and seamless multilingual implementations.

MISSION

To empower organizations to optimize their SAP landscapes and expand globally through excellent technical and linguistic expertise.

/ WHAT WE DO

Three capabilities. One business outcome.

From strategic consulting to software delivery and transformation, our services are designed to solve real business problems and create sustainable value.

01

Enterprise Consulting

Strategic guidance that aligns technology decisions with business goals, operational realities, and long-term growth.

02

Product Development

Full-cycle development—from concept and architecture through implementation, deployment, and continuous improvement.

03

Digital Transformation

Reimagining processes, platforms, and customer experiences with practical technology that can scale with your organization.

Our technical expertise spans system integration, cloud transformation, custom software development, business process optimization and multilingual support—enabling us to work with clients across industries and continents.

/ SAP EXPERTISE

Modernize your SAP landscape with confidence

Deep SAP expertise combined with technical delivery and multilingual capability helps organizations manage complex transformation programs while keeping business continuity in focus.

SYSTEM MIGRATION

Transform legacy environments into modern, scalable solutions powered by SAP expertise and delivered with a strong focus on continuity and risk reduction.

SAP LANGUAGE CONSULTANCY

Ensure custom SAP developments, interfaces, documentation, and user-facing content speak your customers' language—accurately and consistently.

MULTILINGUAL IMPLEMENTATIONS

Support international SAP environments with the linguistic and technical expertise needed to deliver consistent experiences across markets.

/ SERVICES

A practical technology portfolio

Focused services that can be delivered independently or combined into a broader transformation program.

01 System Migration

Legacy-to-modern transformation with SAP expertise.

02 SAP Language Consultancy

Linguistic and technical support for multilingual SAP environments.

03 Vibe Coding Maintenance

Bring AI-generated applications toward production-ready quality, security, and maintainability.

04 Excel & VBA Applications

Tailor-made business applications that fit existing workflows.

05 Product Development

Full-cycle software product development for internal and customer-facing solutions.

06 Ongoing Support & Maintenance

Long-term support, troubleshooting, monitoring, upgrades, patching, and user support.

07 Business Process Optimization

We make your existing processes faster and more efficient

Model → Redesign → Validate → Automate

/ AI & SOFTWARE MAINTENANCE

Move fast with AI. Stay maintainable.

AI-assisted development can dramatically accelerate prototyping. But when applications move toward production, speed without engineering discipline can create technical debt, security risks, and long-term maintenance problems.

Vibe Coding Maintenance

AI-generated applications can accumulate fragmented logic, inconsistent patterns, hidden dependencies, limited documentation, weak test coverage, and hard-to-debug code.

AutomataCore Labs helps organizations bring these applications under control.

FROM AI PROTOTYPE TO PRODUCTION-READY APPLICATION

- Architecture and codebase assessment
- Refactoring and structural improvement
- Dependency and security review
- Documentation and maintainability
- Testing and quality improvement
- Production-readiness support

/ PRODUCT DEVELOPMENT

From concept to deployment

Whether you are creating a customer-facing platform or an internal business tool, our cross-functional approach focuses on scalable, user-centric solutions.

01

DISCOVER

Understand business goals, users, processes, and constraints.

02

DESIGN

Shape the solution, architecture, workflows, and user experience.

03

BUILD

Develop, integrate, test, and iterate with business stakeholders.

04

DEPLOY

Move the solution into production with a clear operational model.

05

EVOLVE

Improve, maintain, and scale as business needs change.

The result is not simply software. It is a solution designed around the way your organization actually works.

/ BUSINESS APPLICATIONS & SUPPORT

Technology that fits the way you work

Not every business challenge requires a large platform. Sometimes the highest-value solution is a focused application that integrates with the tools your teams already use.

Excel & VBA Applications

We deliver tailor-made Excel and VBA applications that slot into existing workflows—helping teams automate repetitive tasks, structure business processes, and improve day-to-day efficiency without unnecessary complexity.

Ongoing Support & Maintenance

Our commitment does not end with deployment. We provide reliable long-term technical support and maintenance, including troubleshooting, performance monitoring, patch management, version upgrades, and user support.

SERVICE LEVELS

SLA-backed service models can be tailored to operational needs.

/ INDUSTRIES

Experience across business-critical environments

We bring our technology and consulting capabilities to organizations with complex processes, distributed teams, and demanding operational requirements.

- **Automotive**
- **Banking**
- **Distribution**
- **Engineering, Construction & Operations**
- **Financial Services**
- **Healthcare**

Global capability. Local understanding.

Our multilingual support capabilities help organizations operate consistently across markets, while our technical expertise supports complex enterprise environments.
